                                                                                                                     Sequence 4363, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APPLICANT: Lynn A Doucette-Stamm and David Bush

```
This invention describes novel microorganisms (A), or their enzymatic extracts, able to convert isoproplamine (I) to L-alaninol (II) and which have the ipuH and ipuI genes, encoding enzymes involved in metabolism of (II), inactivated. (II) is an intermediate for pharmaceuticals, especially ofloxacin. Also the enzyme encoded by the bacterial ipuC gene (a gamma-glutamylamides, sprthase) is used for synthesis of gamma-glutamylamides, specifically theanine. Inactivation of the ipuH and I genes were inactivated produced (II) at 8 mm after 60 hour culture. For a shmilar strain in which only the ipuI had been inactivated the maximum (II) concentration was about 7 mM, after 6 hour, falling to practically zero after about 20 hour. This sequence represents the Pseudomonas putida KIEI/I-BII IpuC protein products (potential glutamine synthetase) which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGGGYEISSVDTGYSDCHLCADLNSLHLLPWSEGAVLAISNPHNFVTSEPLFCSPRVILM 123

This invention describes novel microorganisms (A), or their enzymatic extracts, able to convert isopropylamine (I) to L-alaninol (II) and which have the ipuH and ipuI genes, encoding enzymes involved in metabolism of (II), inactivated. (II) is an intermediate for pharmaceuticals, especially ofloxacin. Also the enzyme encoded by the bacterial ipuC gene (a gamma-qlutamylamides ynthase) is used for synthesis of gamma-glutamylamides specifically theanine. Inactivation of the ipuH and I genes improves production of (II). Typically, a Pseudomonas in which both ipuH and I genes were inactivated produced (II) at 8 mM after 60 hour culture. For a similar strain in which only the ipuI had been inactivated the maximum (II) concentration was about 7 mM, after 6 hour, falling to practically zero after about 20 hour. This sequence represents the pseudomonas putida. IpuC encoded protein described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     71 --DGLEFTGWDSGYPDIALIPDLSTLSLVPWQEKTASVLCDIQH-LNGEPLNLSPRNLLR 127

The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central enrouses system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies pepcific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a coryneform bacterium (I) which has L-glutamine producing ability and has been modified so that its intracellular glutamine synthetase activity should be enhanced. Also described is a DNA (II) coding for protein having glutamine synthetase activity or glutamine synthetase adenylyl transferase activity (see ABP53500 and ABP53501 respectively). (I) Is useful for producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Brevibacterium lactofermentum; glnA2; glnE; L-glutamine; fermentation; coryneform bacterium; glutamine synthetase adenylyl transferase; glutamine synthetase; liver function promoting agent; enzyme; seasoning.

L-glutamine, by culturing a bacterium in a medium to produce and accumulate L-glutamine in the medium and collecting the L-glutamine. L-glutamine produced by (1) is useful industrially as an ingredient of seasonings, as liver function promoting agents, in amino acid transfusions, and in comprehensive amino acid preparation. (II) is useful for breeding (I). The by-production of L-glutamic acid is suppressed and the production efficiency of L-glutamine is improved using (II). The present sequence represents Brevibacterium lactofermentum glnA2, which has glutamine synthetase activity.
                                                                                                                                                                   12;

sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, coryneform bacterium, coryneform bacterium, coryneform bacterium coryneform bacterium coryneform bacterium of a gene derived from coryneform bacterium. Coryneform bacterium of a gene derived amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NLKLKGLFASELEFNLFNETYKSASQKHWKNLKT-----AQPHHQWMNISASSGIETFM 184

                                                                                                                                                                                                                                                                                                                           AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               99
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                             The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53100-ABB55621). The nucleic acid sequence; is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-O7-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

```
The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide acquences given in ABO81842 and ABO81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequence exhibiting at least 90% identity or which hybridises with the sequence given in ABO81842 and ABO81843. Also described is a polynucleotide (II) encoding a heterologous polypeptide in frame to a polynucleotide concoding a heterologous polypeptide. (I) has antidiarrheic and antibacterial activities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented products, ice-creams, fermented cereal based products, infant formula, pet food or a pharmaceutical composition spelected from tablets, liquid bacterial suspensions, dried oral cupplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the stidobacterium related nucleotide sequences given in the Sequence infant the present invention but not mentioned further within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bifidobacterium longum NCC2705; Bifidobacterium; bacterial; antidiarrheic; antibacterial; inhibitor of Salmonalla; detection; identification; lactic acid bacterium; diarrhoea; pathogenic bacteria; rotavirus; food composition; pharmaceutical composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bifidobacterium longum NCC2705 ORF amino acid sequence SEQ ID NO:783

CC the specification. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.

CN absorbed and an ample. (I) is used to determine whether a compound binds to biological sample. (I) is used to determine whether a compound binds to complete a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be maningitis. Nucleic cused as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be maningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          58 VTIEGIAGGGYEISSVDTGYSDCHLCADLNSLHLLPWSE--GAVLAISNPHNFVTSEPLF 115

```
The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antiblocius, the essential genes themselves and the discovery of novel antiblocius, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                        AAU37785
                                                                                                                                                                                                                                 à
                                                                                        원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5481 sequences (S1), given in the specification. The proteins have annibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a streptococcus mapple. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I) may be used to accombinantly produce (I) and may be used in gene therapy. Antibodies to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       59 TIEGIAGGGYEISSVDTGYSDCHLCADLNSLHLLPWSE--GAVLAISNPHNFVTSEPLFC 116

The invention also relates to their use in vaccines and in screening methods. The invention is useful as an immunogen and/or antigen that may be used in vaccines or diagnostic assays. The methods are useful for the selection/diagnosis of S. pneumoniae, and determining whether a protein or polypeptide represents a potential anti-microbial target. An agent capable of antagonising, inhibiting or otherwise interfering with the function or expression of a protein or polypeptide is useful in the manufacture of a medicament for use in the treatment or prophylaxis of S.pneumoniae infection. The invention is also used in gene therapy. The present sequence is S. pneumoniae protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                        Streptococcus pneumoniae type deminiate UNA coculiy septions from the ABS56454. Also included are an antibody which binds one of the Corpotations, treating a patient by administering the protein, DNA or antibody (in a composition), a kit comprision first and second primers, which are the nucleic acid cited above or fragments between nucleotides of a sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target compound the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers complement of the target sequence, and where the parts of the primers of the target sequence to be amplified, assay comprising contacting a test compound with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more contacting the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful for the proteins, the present sequence is one of identifying immunodominat proteins. The present sequence is one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10;
                                                                                                                                                                                                                                                                                                                                  The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer redable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                58 VTIEGIAGGGYEISSVDTGYSDCHLCADLNSLHLLPWSE--GAVLAISNPHNFVTSEPLF 115

                                                                                                                                                                                                                                                                                    LRIGGADINPYLAFSAIIAAGISGIEEKLELPPPASGNVY-----NDKELPEFPNSLQ 403
                                                                                                                                                                                                                                                                                                                         The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonae aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, the discovery of novel antibiotics, the essential genes themselves and the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella comential coli, Staphylococcus aureus, Salmonella typhi, Klebsiella comentian is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.
